REPLY TO
ATTENTION OF:
PRT

30 DEC 1985

SUBJECT: Evaluation of Prototype LANDSAT Photoimage Map

TO: See Distribution List

1. The Defense Mapping Agency is investigating the feasibility of producing photoimage maps from LANDSAT imagery. Six prototype maps are being forwarded under separate cover for your review. The purpose of these maps would be to provide an interim-or substitute-for the JOG (ground) and the 1:100,000 scale map in low priority areas and areas of sparse cultural features. Further, photoimage maps produced from LANDSAT imagery could provide the user a quick response product that would be suitable for planning and limited operational use in crisis actions. DMA requests your views as to the acceptability of LANDSAT photoimage maps for these purposes.

2. A questionnaire for use in your response is enclosed. Your careful analysis of these products is solicited. The DMA Hydrographic/Topographic Center (PRT) point of contact is [redacted] AUTOVON 287-2029, or

STAT

3. Your response by 31 March 1986, would be appreciated.

LANDSAT QUESTIONNAIRE

1. Would photoimage maps of this type be of use to your command?
2. Which scale photoimage map provides you the detail you need?
3. What would you use a photoimage map for?
4. What types of features need to be highlighted/annotated?
5. Would minor differences in color from one sheet to the next be acceptable?
6. Would you support the validation of these products for use in areas over which you need mapping?

As interim products for low priority sheets?

As substitute products for low priority sheets?

Other areas?

7. In the listed categories, what improvements would make these products more usable.

Marginal Information -

Contour Information -

Feature Annotation -

Other -

8. Comment on items not covered.
